

HOMEMADE GAK

This recipe is so easy and takes 2 minutes to make, and it provides hours of entertainment!

Pull out the plastic cookie cutters and the kids can have a ball. You'll be glad to know that it make a big mess. Here is how you can make Homemade GAK.

Supplies:

- TWO 4 oz. bottles of Elmer's Glue
- 1 tsp. Borax (found in the laundry detergent section of the store)
- Water
- Plastic Cup
- Bowl
- Food Coloring

Directions:

1. Gather all your supplies together. Begin by emptying the two bottles of glue into a bowl.
2. Then fill bottles with warm water and shake. Empty into the bowl.

3. Add some food coloring. Try Betty Crocker Neon Gel Food Colors. The neon made it look great, but you may need to put in almost half the tube into the mixture to make it really bright. Set aside.

4. Add 1/2 cup warm water to your cup. Add 1 tsp. borax to the water and mix until borax dissolves. Then pour this into your glue bowl. Start stirring and you will notice how it starts becoming stringy. Keep mixing by using your hands and squishing around. You will notice after a few minutes that it has become pretty gelatinous.

5. Let the kids play with it for a bit and it will become the perfect gooey consistency.

It is so fun and easy. You can make purple and pink gak too.

This is a fun and easy homemade craft project that the kids will enjoy for a long time. It doesn't smell and get all over like other gooey substances and it's so fun to play with. Plus, it is inexpensive to make!
